

"status" can be either:
0 (available),
1 (reserved)
2 (in use)
3 (unavailable)

"brand" and "color"
are parsed down to
numbers for ease of
access

"availableIn" stores the
amount of days until the
car can be rented (0
means now; -1 means it
is unavailable for renting)

pathNames in all cases
refer to the relative path
when inside their
appropriate folders

images for licences and
ids are found inside the
client's folder, and thus
hace the same relative
name
